

Compact yet powerful mobile shredding

The M&J M3000 mobile pre-shredder is slightly more compact than the M&J M4000, making it an excellent choice for landfills and transfer stations with narrow access routes. But don't let its smaller size fool you - performance is not compromised. The M3000 effortlessly shreds C&D waste, C&I waste, bulky materials, wood, cardboard, plastic, and more, delivering the versatility and power others often lack. Built for exceptional durability and equipped with crawler tracks, it's designed to perform reliably even in the toughest environments.

Versatility on the move:

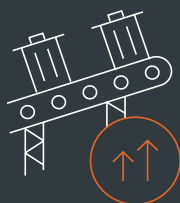

M&J mobile pre-shredders deliver reliable performance across various applications - all while on the move. You get a truly universal shredder ideal for landfills, rentals, and more.

Tackle the toughest

waste: Tested to tackle the toughest shredding jobs, thanks to aggressive, hard-steel knives welded onto the shaft and an open cutting table for debris to fall through.

Key benefits at a glance

Improve your productivity:

The twin-shaft, asynchronous cutting system reduces bridging and ensures consistent output, while an anti-jam system keeps operations running smoothly even on tough waste.

Operate trouble-free:

Smart design minimises unplanned repairs and stops, lowering operational costs. Access real-time performance data via myM&J Performance and control the shredder remotely for safe, efficient handling, even while operating.

Unique M&J Features

Monitor your shredder's health.

With **myM&J Performance**, you can monitor your shredder's health in real-time and avoid costly breakdowns.

myM&J Performance is a digital solution that optimizes your M&J shredder's operations. Through remote data monitoring of your shredder, you will get access to critical insights into your waste shredder's condition, performance, and maintenance needs.

" We have seen cases where transfer stations have – by using the M&J mobile pre-shredder – both increased the tonnage per rail car by 25% and extended the landfill lifetime by up to 6 years, as they could fit more tons per cubic yard.
